Overview of Topic

Global warming is the phenomenon of a gradual increase in the temperature near the earth's surface. This phenomenon has been observed over the past one or two centuries. This change has disturbed the climatic pattern of the earth. There are several causes of global warming, which have a negative effect on humans, plants and animals. These causes may be natural or might be the outcome of human activities. In order to curb the issues, it is very important to understand the negative impacts of global warming.

Objectives

After completion of value added course, the students will be able to:

- Define Global Warming and Energy Challenges
- Discuss the Causes of global warming
- Discuss the Global Warming and the Polar Ice Caps
- Discuss Unbalancing of Nature as a Consequence of Global Warming
- Understand the Nuclear Power and Climate Change
- Understand the Climate Change and Animal Habits
- Describe the Controversy and Reality on Global Warming
